INITIAL ASSESSMENT REPORT

Assessment of psychological well-being to guide personalised care and support

Conducted on : 28 June 2025

Name	Age	Gender
Aarav Mehta	7 Yrs	Male

The screening checklist assessed emotional well-being, anxiety, depressive symptoms, attention and concentration, behavioural regulation, social skills, self-esteem, family environment, sleep/appetite, and school engagement.

Emotional Wellbeing & Social Skills	60%
Language & Communication	30%
Cognitive & Learning	90%
Behavioural Regulation	70%
Adaptive & Self Help Skills	60%
Gross & Fine Motor Skills	60%

Main Finding

- Cognitive development is broadly age appropriate.
- Delays noted in social communication and interaction skills.
- Reduced attention span with increased activity levels.
- Difficulties observed in emotional and behavioural regulation.
- Mild indicators of attention-related concerns present.

Key Traits

- Active and alert
- Curious and exploratory
- Emotionally reactive under stress
- Emerging social interest
- Age-appropriate cognitive awareness

SUMMARY OF FINDINGS

Aarav presents with broadly age-appropriate cognitive development with noted concerns in attention regulation, social communication, and behavioural modulation. These difficulties are influenced by high activity levels, limited sustained attention, and emerging emotional regulation skills. Early intervention and parent-guided support are expected to significantly improve functional outcomes.

STRENGTHS

a. Awareness of surroundings is present.

b. Interest in play and initiation attempts observed.

c. Social smile and emotional responsiveness noted.

d. Cognitive abilities broadly age appropriate.

e. Potential for improvement with structured intervention.

CONCERNS

a. Delays in social communication and reciprocal interaction.

b. Reduced attention span and increased activity levels.

c. Difficulty regulating frustration and emotional responses.

d. Sensory processing challenges affecting behaviour.

e. Excessive screen exposure impacting engagement and interaction.

RECOMMENDATIONS

Early intervention focusing on social communication and interaction skills is recommended.

Behavioural intervention aimed at improving attention and emotional regulation is advised.

Speech and language therapy support is suggested to enhance functional communication.

Occupational therapy is recommended to address sensory processing and self-regulation needs.

Parent guidance and structured home routines are advised, with reduction of screen exposure.

GOALS

1. Improve social interaction and communication skills.
2. Enhance attention span and behavioural regulation.
3. Reduce maladaptive behaviours through consistent strategies.
4. Lorem ipsum dolor sit amet, consectetur
5. Lorem ipsum dolor sit amet, consectetur

SUGGESTED THERAPIES

a. Behaviour modification therapy focusing on attention, impulse control, and emotional regulation.

b. Parent counselling and training to implement consistent behavioural strategies at home.

This report is not valid for Medico-Legal Purpose
All findings are based on the responses given by the client in the testing situation and interpretations may vary depending upon the treating psychiatrist/ therapist.
